

Auto-Action Thresholds Policy

Document Code: FRAUD-003 | Version: 3.2 | Effective Date: 01-Apr-2026 | Status: Active

1. Risk Score Bands

Every transaction receives a composite risk score from 0-100, built from the signals in FRAUD_001 and FRAUD_002. The score determines the automated action taken:

1.1 Action Bands

Risk Score	Automated Action
0 - 44	Clear -- no action, transaction proceeds normally
45 - 74	Flagged -- routed to Fraud Analyst for review, transaction proceeds
75 - 100	Auto-Freeze -- transaction held pending analyst confirmation

2. CRO-Approved Auto-Freeze Threshold

The 75-point auto-freeze threshold in section 1.1 is a Chief Risk Officer-approved setting and may only be changed with CRO sign-off and a documented rationale. It may not be adjusted by any individual analyst or by the Fraud Detection system itself.

3. Customer Appeal Rights

Any customer whose transaction is auto-frozen must be notified within 2 hours and given a documented channel to contest the freeze. An unresolved appeal older than 24 hours is automatically escalated to Level-2 review under FRAUD_004.

4. No Fully Autonomous Confirmation

Regardless of risk score, the system never independently confirms a transaction as fraudulent. Auto-Freeze is a precautionary hold, not a fraud determination -- only a human Fraud Analyst or the Fraud Risk Committee (per FRAUD_004) may classify a case as confirmed fraud.
