

Case Closure and Audit Policy

Document Code: FRAUD-005 | Version: 3.2 | Effective Date: 01-Apr-2026 | Status: Active

1. Case Closure Classifications

Every investigated case must be closed under exactly one of the following classifications: Confirmed Fraud, False Positive (legitimate transaction, no action needed), or Inconclusive (insufficient evidence -- held open for 30 days pending further activity, then closed by default to False Positive with a documented note).

2. Mandatory Audit Trail Fields

- Risk score and every signal that contributed to it, at time of flagging
- Every analyst and system action taken on the case, with timestamp and actor
- The specific policy clause(s) relied on for the final classification
- Customer notification and appeal correspondence, if any

3. Retention Period

Confirmed Fraud case records are retained for 8 years. False Positive and Inconclusive case records are retained for 5 years. All retention periods run from the case closure date, not the transaction date.

4. Regulatory Reporting Threshold

Any case classified as Confirmed Fraud involving a transaction value above Rs. 10,00,000, or any case with a cross-border high-risk-jurisdiction match regardless of value, must be reported to the designated regulatory desk within the statutory reporting window.
